Publication No. US20030185844A1

GENERAL INFORMATION:

APPLICANT: Sahin, Ugur

APPLICANT: Sahin, Ugur

APPLICANT: Steundschuh, Michael

APPLICANT: Stevanovic, Stefan

ITLLE OF INVENTION: Method for Determining Presence of Cancer In a Sample By Determ:

ITLLE OF INVENTION: Expression of an SSX Gene, Peptides Derived From Said SSX Gene

ITLLE OF INVENTION: Gene, and Uses Thereof

ITLLE OF INVENTION: Gene, and Uses Thereof

FILE REFERRNCE: LUD 5556.1

CURRENT PAPLICATION NUMBER: US/10/177, 277

CURRENT FILING DATE: 1999-06-25

PRIOR APPLICATION NUMBER: US/09/344,040

PRIOR APPLICATION NUMBER: US 09/105,839

PRIOR FILING DATE: 1998-06-26

PRIOR FILING DATE: 1998-06-26

Blechschwidt K., Nyakatura G., Strom T.M., Drescher B., Menzel U., Meindl A., Rosenthal A., Sosenthal A., Sosenthal A., Submitted (OCT-1999) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: Could act as a modulator of transcription.
-!- SIMILARITY: Belongs to the SSX family.
-!- SIMILARITY: Contains 1 KRAB-related domain.
   Generation and initial analysis of more than 15,000 full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MIM; 300326; -.

Infentification of two alternative fusion genes, SYT-SSXI and

"Identification of two alternative fusion genes, SYT-SSXI and

"Identification of two alternative fusion genes, SYT-SSXI and

"IDENTIFICATION: Could act as a modulator of transcription.

-! FUNCTION: Could act as a modulator of transcription.

-! FUNCTION: Could act as a modulator of transcription.

-! FUNCTION: Could act as a modulator of transcription.

-! FUNCTION: Could act as a modulator of transcription.

-! FUNCTION: Could act as a modulator of transcription.

-! FUNCTION: Could act as a modulator of the synovial sercoma and epithelial cell lines.

-! DISEASE: Participates in a t(X;18) (p11.2;q11.2) chromosomal translocation that is specifically found in more than 80% of synovial sercoma and produces the SSXT-SSXI or SSXT-SSXI for SXT-SSXI or SSXT-SSXI or transforming activity. Heterogeneity in the position of the breakpoint can occur (low freequency).

-! SIMILARITY: Belongs to the SSX family.

-! SIMILARITY: Belongs to the SSX family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         colon,

--- TISSUE SPECIFICITY: Expressed in all tissues examined. The highest level expression was found in the kidney and testis.
--- PIM: EGF stimulates phosphorylation on Tyr-residues.
--- SIMILARITY: Contains 1 EH domain.
--- SIMILARITY: Contains 1 EF-hand calcium-binding domain.
--- CAUTION: Ref. 3 sequence differs from that shown due to a
                                                                                                                                                   GRB2. Binding to RALBP1 does not affect its Ral-binding activity. Forms a complex with the SH3 domains of CRK and GRB2 which may link it to am EGF-responsive tyrosine kinase.

-!- FUNCTION: May coordinate the cellular actions of activated EGF receptors and Ral-GTPases (By similarity).

-!- SUBUNIT: Homodimer (Potential). Interacts with RALBPI, CRK and GRB2. Binding to RALBPI does not affect its Ral-binding activity. Forms a complex with the SH3 domains of CRK and GRB2 which may link it to an EGF-responsive tyrosine kinase (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chem. Res. Toxicol. 11:1145-1153(1998).
-!- FUNCTION: This protein is involved in the oxidative metabolism a variety of xemobiotics such as drugs and pesticides.
-!- CATALYTIC ACTIVITY: N,N-dimethylaniline + NADPH + O(2) = N,N-dimethylaniline N-oxide + NADP(+) + H(2)O.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (HIGH MANNOSE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 InterPro; IPR00159; Adrndx reductase.

A greater expression is seen in the maturing neurons after they leave the neural epithelium. It is also found in the gut epithelium and adrenal medulla. SIMILARITY: Contains 1 HMG box domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Embryonic expression of the chicken Sox2, Sox3 and Sox11 genes suggests an interactive role in neuronal development.";
